

Adding Decals To HTH Signs

What You'll Need:

Spray Bottle
Squeegee (**Included**)
Liquid Hand or Dish Soap

You will need to mix a **soapy water solution** to assist in the application of the new decal. For the solution, fill the spray bottle halfway with water and add a few drops of liquid hand or dish soap. Mix well.

Applying the Decal:

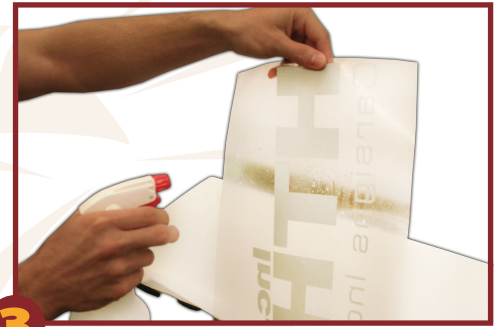

1

Clean the sign with the soap and water solution.

2

Remove the backing from the new decal.

3

Spray the adhesive side of the decal with the soap and water solution. This will help position the new decal on the sign.

4

Place the decal on the sign and slide back and forth until the decal is straight and centered on the sign.

5

Using the provided squeegee, press the decal to the sign taking care to remove all air bubbles and excess water. Once the decal is smooth and centered wipe away any excess water and allow to dry.
