

# Installing Additional Magnets on HTH Quad

## What You'll Need:

(2) Pre-assembled Magnets (Included)  
Phillips Head Screwdriver

**Pre-assembled HTH Magnets** will include the magnet, magnet cover, rubber grommet and screw. Ensure that magnets are assembled and equipped with magnet covers before attaching to the sign.

Your HTH Quad will have stickers in the magnet cavities designated for the additional magnets. Simply remove these stickers to locate the screw inserts underneath.

## Installing Additional Magnets:

Place the screw of the pre-assembled magnet into the insert.

Using the Phillips head screwdriver and rotating **CLOCKWISE** secure the magnet to the sign. Continue rotating until the magnet is at its absolute tightest and lays flat. Repeat with the remaining magnet on the opposite side.
